RE: Dennis Alfredson, PE

This letter is to thank and recommend the engineering firm Plat & Site Civil Design, LLC for helping me with a difficult project that became delightfully easy because of his assistance.

I am owner of WA State licensed Vocational Education training program, just published a book, and needed an engineering firm to complete the development of a forty acre property on which the school resides. I needed expert work at a fair cost, with someone who took the responsibility away from me. Two other much larger engineering agencies sent proposals, and I checked with several local business owners who I trusted and they recommended Dennis Alfredson, PE.

Dennis has proved to be a Godsend. His responsiveness and effectiveness in working with agencies has allowed this project to be expedited beyond my expectations. I needed to finish in 2009 summer.

I appreciated his quick response. He personally working directly with me through the whole project. He has a calming demeanor which was very effective when I became frustrated and aggravated. He is very patient and thorough.

The cost estimate was fair and lower than the other estimates. He stuck by the estimate even with some added changes. Dennis lived up to the agreement he made with me in every way, especially in quickly getting the work through the necessary agencies. I highly recommend his work and him as a decent human being. I would use this firm again for any further projects.

Contact me for further information needed: soma@tx3.net or 360 829-1025.

Sincerely,

Karen L. Bolesky M.A., L.M.H.C., L.M.P.
